

Prepared for Exceleras · June 2026

Who we are

PropIntel produces field-verified property intelligence reports — a defensible, modern alternative to the traditional BPO. Instead of six hand-picked comps and a single opinion, we read every active and sold comparable in the market, compute true absorption and months-of-supply, surface title, neighborhood, and flood red flags, and deliver a one-page verdict a lender or asset manager can act on in minutes. We support desktop and field (photo-verified) products nationwide.

What we deliver

- A one-page verdict (Low / Moderate / High / Critical) with a prioritized red-flag list — read in under 10 minutes.
- True market reality: all comps read, not six — absorption, months-of-supply, and which price bands are moving versus sitting.
- A defensible as-is value range from size-matched sold comps — not a single unaccountable number.
- Neighborhood intelligence pulled automatically: FEMA flood zone, census-tract vacancy, owner-occupancy, and value benchmarks.
- Field-verified condition and photos on field orders (subject, both neighbors, across the street, plus any damaged surrounding homes).

Why it beats a \$50 BPO

- Reads the whole market, so the value can't be propped up by a cherry-picked comp set.
- Flags oversupply that won't clear at retail — the single most common blind spot in a BPO.
- Catches title, flood, and neighborhood risk a drive-by misses.

What we need from Exceleras, per order

The more that is passed with each order, the faster the turnaround and the lower the cost to the client.

- Order identifiers: order ID, client, product type, due date / SLA, rush flag.
- Subject property: full address, APN, property type, county.
- Property characteristics if available (beds/baths/sqft/lot/year, last sale, tax assessed).
- Decision context: loan amount or list price; any prior valuation on file.
- Any data you can pass to reduce cost: comps, MLS sheet with history, tax record, area reports.
- Field logistics: who captures photos, occupant/access details.
- Your delivery spec: the format and fields you accept back, and how we submit.

What we return

- A branded report PDF (verdict, market intelligence, red flags, value range, field photos).
- Key data fields for your portal: value range, absorption / months-of-supply, active vs. sold counts, flag count.

We are built and ready to onboard. We would welcome a call to map the integration and scope a pilot batch.
